The Elsevier article class FAQs Preparing CRC journal articles

Download the journal article template package

The Elsevier article class

The Elsevier article class helps you to format the frontmatter of your manuscript properly. It is part of the elsarticle package. This package is contained in most TeX distributions and is available in the template. The elsarticle documentation and some common templates and bibliographic styles are part of this package as well.

Two additional class files and templates are available for single and double column. These can be downloaded from here.

Most journals accept a PDF of your manuscript at initial submission.

When you are asked to submit your manuscript source files, do the following if PDF version is allowed:

- Build a PDF of your manuscript source files on your computer and attach it with item type 'Manuscript'.
- Bundle all manuscript source files in a single archive and attach it with item type 'LaTeX source files'. Source files include LaTeX files, BibTeX files, figures, tables, all LaTeX classes and packages that are not included in TeX Live and any other material that belongs to your manuscript.

When you are asked to submit your manuscript source files, do the following if PDF version is restricted:

- Select the Manuscript item type for .tex, .bbl, .bst, .sty, .bib, .cls, .nls, .ilg, and .nlo files.
- Select the Figure item type for images and graphic files.
- Select the Table item type for tables in .tex format.

Depending on the publication, Manuscript, Figure, or other item types may have different names.

Do not upload LaTeX files as Supplemental items (under Supplementary material/Latex source file item type).

For step-by-step instructions, please refer Submitting LaTeX Files to Editorial Manager ↗

Frequently asked questions

Here we have answered some of the most common questions that arise at the point of submitting an article in LaTeX. If your question relates specifically to the Latex template, please contact elsarticle@stmdocs.in

Preparing CRC journal articles

Camera-ready copy (CRC) journals are those that reproduce the author's manuscript exactly, with no intervention by the typesetter. Such journals are the exception rather than the rule; if a journal is CRC, this fact is clearly indicated in the instructions to authors. The Procedia series of journals, for example, are genuine CRC. Please read carefully the journal's instructions to authors.

For LaTeX authors of camera-ready articles, we provide the ecrc.sty package. This is a small package designed to work with the elsarticle document class. All the features of elsarticle are available, along with a few extra commands specific to CRC reproduction. Documentation for the use of ecrc.sty is included in the manuscript template file available below.

The archive file elsarticle-ecrc.zip contains all the necessary files to run this package. To

- A BibTeX style file for the numbered reference style, elsarticle-num.bst (other bibliographic styles are available (see above), but Elsevier CRC generally uses a numbered

reference style)

- The package file for Elsevier CRC, ecrc.sty
- Journal logo files Elsevier-logo-3p.pdf and SDlogo-3p.pdf used to make the CRC article (when compiling with ***pdflatex***)
- Alternative logo files Elsevier-logo-3p.eps and SDlogo-3p.eps for use with ***latex***
- A template manuscript file, ecrc-template.tex

Once the package has been installed, edit the manuscript file ecrc-template.tex according to the instructions in that file, and save with a new name. The manuscript file should be compiled with ***pdflatex*** (and ***bibtex*** if desired).

Please only use these packages after confirmation from the journal's editors.

- Nuclear and Particle Physics Proceedings
- Procedia Computer Science
